

**Is Multiplication Just Repeated Addition?  
Insights from Japanese Mathematics Textbooks for  
Expanding the Multiplication Concept**

Makoto Yoshida, Ph.D.  
William Paterson University  
YoshidaM@wpunj.edu

2009 NCTM Annual Conference  
April 23, 2009

**Can you draw a picture that  
represents  $3 \times 4$ ?**

or

or

Or it does not matter?

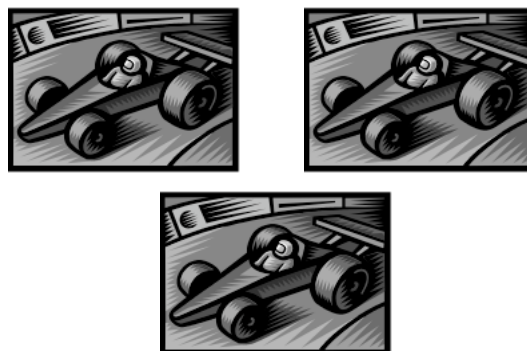

How many wheels?

3x4, or 4x3, or it doesn't matter?

How many wheels?

3x4, or 4x3, or it doesn't matter?

Are these both  $3 \times 4$  and  $4 \times 3$ ?

If you say  
multiplication is repeated addition,  
are the both  
 $3+3+3+3$  and  $4+4+4$ ?

What is the total length?

Is this  $3+3+3+3$ , or  $4+4+4$ , or it doesn't matter?

How should we write this using multiplication  $3 \times 4$  or  $4 \times 3$ ?

How did you learn to remember multiplication table of 3?

$$3 \times 1 = 3$$

$$3 \times 2 = 6$$

$$3 \times 3 = 9$$

$$3 \times 4 = 12$$

$$3 \times 5 = 15$$

$$3 \times 6 = 18$$

$$3 \times 7 = 21$$

$$3 \times 8 = 24$$

$$3 \times 9 = 27$$

or

$$1 \times 3 = 3$$

$$2 \times 3 = 6$$

$$3 \times 3 = 9$$

$$4 \times 3 = 12$$

$$5 \times 3 = 15$$

$$6 \times 3 = 18$$

$$7 \times 3 = 21$$

$$8 \times 3 = 24$$

$$9 \times 3 = 27$$

*If the first number represents number of groups...  
(3 groups of ...)*

*If the second number represents number of groups...*

## **NCTM: *Focal Points***

**Grade 3: Developing understandings of multiplication and division and strategies for basic multiplication facts and related division facts.**

**Grade 4: Developing quick recall of multiplication facts and related division facts and fluency with whole number multiplication.**

**Grade 5: Developing an understanding of and fluency with division of whole numbers.**

## **NCTM: *Focal Points***

**Grade 6: Developing an understanding of and fluency with multiplication and division of fractions and decimals.**

**Grade 6: Connecting ratio and rate to multiplication and division.**

**Grade 6: Writing, interpreting, and using mathematical expressions and equations**

## Devlin on Multiplication

Multiplication simply is not repeated addition, and telling young pupils it is inevitably leads to problems when they subsequently learn that it is not. Multiplication of natural numbers certainly gives the same result as repeated addition, but that does not make it the same... Telling students falsehoods on the assumption that they can be corrected later is rarely a good idea. And telling them that multiplication is repeated addition definitely requires undoing later.

### Tokyo Shoseki's Mathematics for Elementary School (Grades 1 to 6)

The textbook follows  
1989 Japanese National  
Course of Study that was  
examined in the 1995  
TIMSS.

It is translated into English and available at [www.globaledresources.com](http://www.globaledresources.com).

2B, p. 14

Let's find out how many children are on each ride at the amusement park!

- How many children are on the tea-cup ride?
- How many children are on the boat ride?

There are 5 children on each boat and there are 4 boats. There are 20 children altogether.

Let's check other rides!

Let's look at the teacup ride again!  
Can we use multiplication for it?

2 How many children are on the train altogether?

There are 4 children in each train car, and there are 3 train cars. So we have 12 children altogether. You can write this using the following math sentence.

$$4 \times 3 = 12$$

"Four multiplied by three equals twelve"

4	×	3	=	12
⋮		⋮		⋮
number of object in each group		number of groups		total number of objects

p. 16

## Important ideas of multiplication

- Multiplication sentences describe equal set situations.
  - Repeated addition and skip counting are ways to find the total (product).
- The numbers in a multiplication sentences mean something specific:
  - Number in a group - multiplicand
  - Number of groups - multiplier
  - Total number of objects - product

2 Please arrange your counters to show the following math sentences.

(1)  $3 \times 2$  (2)  $2 \times 3$  (3)  $5 \times 2$

(1)

(3)

(2)

### 2 Multiplication Facts for 5 and 2

#### The multiplication facts for 5

- 1 Each bag has 5 oranges. There are 4 bags of oranges. How many oranges do we have altogether?

- 1 How many oranges are there in 2 bags? Let's find out how many oranges there are in 3, 4, and more bags!

$5 \times 1 = \square$   
 $5 \times 2 = \square$   
 $5 \times 3 = \square$   
 $5 \times 4 = \square$

There are 20 oranges altogether.

- 2 How many oranges are there in 5 bags?  
3 How about in 6, 7, 8, and 9 bags?

$5 \times 5 = \square$   
 $5 \times 6 = \square$   
 $5 \times 7 = \square$   
 $5 \times 8 = \square$   
 $5 \times 9 = \square$

If you remember the answers for  $5 \times 4$  is "five, four, 20" and  $5 \times 5$  is "five, five, 25", they will be useful. This way of remembering multiplication facts is called "kuku" in Japanese.

- 2 Let's memorize the multiplication facts for 5!

Let's do the practice on page 29.

- 1 How are the 5's facts increasing?

The Multiplication Table of 5		
$5 \times 1 = 5$	.....five, one,	5
$5 \times 2 = 10$	.....five, two,	10
$5 \times 3 = 15$	.....five, three,	15
$5 \times 4 = 20$	.....five, four,	20
$5 \times 5 = 25$	.....five, five,	25
$5 \times 6 = 30$	.....five, six,	30
$5 \times 7 = 35$	.....five, seven,	35
$5 \times 8 = 40$	.....five, eight,	40
$5 \times 9 = 45$	.....five, nine,	45

Look carefully at the multiplication table that you made.

- 1 There are 5 strawberries on each plate and there are 6 plates. How many strawberries do you have altogether?

- 2 Recite the 5's table starting with the largest answer.

Five, nine, 45  
Five, eight, 40  
Five, seven, 35  
.....

### 3 Multiplication Facts for 3 and 4

#### The multiplication facts for 3

- 1 Let's make a multiplication table for 3!

$3 \times 1 = \square$   
 $3 \times 2 = \square$   
 $3 \times 3 = \square$   
 $3 \times 4 = \square$

- 1 To get an answer for  $3 \times 5$ , what do you need to add to the answer for  $3 \times 4$ ?

$3 \times 5 = \square$

- 2 Use the answer for  $3 \times 5$  to find  $3 \times 6$ .

$3 \times 6 = \square$

- 3 Find the answers for  $3 \times 7$ ,  $3 \times 8$ , and  $3 \times 9$ .

$3 \times 7 = \square$   
 $3 \times 8 = \square$   
 $3 \times 9 = \square$

In the multiplication math sentence  $3 \times 9$ :

3 is called the **multiplicand** and 9 is called the **multiplier**.

$3 \times 9 = 27$

Multiplicand Multiplier

#### The multiplication facts for 4

- 3 Let's make a multiplication table for 4!

$4 \times 1 = \square$   
 $4 \times 2 = \square$   
 $4 \times 3 = \square$   
 $4 \times 4 = \square$   
 $4 \times 5 = \square$

- 1 When the multiplier of  $4 \times 3$  increases by 1, how many does the answer increase? Also, what happens when the multiplier of  $4 \times 4$  increases by 1?

$4 \times 3 = \square$   
 increase by 1      total increase  
 $4 \times 4 = \square$   
 increase by 1      total increase  
 $4 \times 5 = \square$

- 2 Please find the answers for  $4 \times 6$ ,  $4 \times 7$ ,  $4 \times 8$ , and  $4 \times 9$ .

$4 \times 6 = \square$   
 $4 \times 7 = \square$   
 $4 \times 8 = \square$   
 $4 \times 9 = \square$

### ■ Multiplication Facts for 6 and 7

**1 The multiplication facts for 6**

Let's make a multiplication table for 6 using the ideas you learned before.

In the 6's table, each answer increases by 6 so ...

$6 \times 1 = 6$        $6 + 6 = 12$

$6 \times 2 = 12$        $6 + 6 + 6 = 18$

$6 \times 3 = 18$

Sayuri

In the 6's table, when the multiplier increases by 1, the answer increases by 6 so ...

$6 \times 1 = 6$        $6 + 6$

$6 \times 2 = 12$        $12 + 6$

$6 \times 3 = 18$

Minoru

$6 \times 1 =$    
 $6 \times 2 =$    
 $6 \times 3 =$    
 $6 \times 4 =$    
 $6 \times 5 =$    
 $6 \times 6 =$    
 $6 \times 7 =$    
 $6 \times 8 =$    
 $6 \times 9 =$

1 Please write the answers for the multiplication facts for 6 in the multiplication table on page 31.

**2** Let's memorize the multiplication facts for 6!

Let's do the practice on page 29.

1 Let's look at the multiplication table of 6 carefully.

The answers for  $6 \times 4$  and  $4 \times 6$  are the same.

Yuji

$6 \times 4 = 4 \times 6$

The answers to the multiplication facts for 6 are the same as the multiplication facts for 3 added to themselves.

Naoko

$\text{Multiplication facts for 6} = \text{Multiplication facts for 3} + \text{Multiplication facts for 3}$

$6 \times 1 = 6$  .....six, one, 6  
 $6 \times 2 = 12$  .....six, two, 12  
 $6 \times 3 = 18$  .....six, three, 18  
 $6 \times 4 = 24$  .....six, four, 24  
 $6 \times 5 = 30$  .....six, five, 30  
 $6 \times 6 = 36$  .....six, six, 36  
 $6 \times 7 = 42$  .....six, seven, 42  
 $6 \times 8 = 48$  .....six, eight, 48  
 $6 \times 9 = 54$  .....six, nine, 54

1 Let's find the same answer to  $6 \times 5$  in the 5's table.

### ■ The multiplication facts for 7

**3** Let's make a multiplication table for 7 using the ideas you learned before.

In the 7's table, each answer increases by 7 so ...

Ritsuko

In the multiplication table of 7, when the multiplier increases by 1, the answer increases by 7 so ...

Makoto

The answers for  $7 \times 2$  and  $2 \times 7$  are the same so ...

Kazuya

$7 \times 1 =$    
 $7 \times 2 =$    
 $7 \times 3 =$    
 $7 \times 4 =$    
 $7 \times 5 =$    
 $7 \times 6 =$    
 $7 \times 7 =$    
 $7 \times 8 =$    
 $7 \times 9 =$

1 Please write the answers for the multiplication facts for 7 in the multiplication table on page 31.

**4** Let's memorize the multiplication facts for 7!

1 Let's look at the multiplication table of 7 carefully.

$7 \times 3 = 21$ ,  $3 \times 7 = 21$   
 $7 \times 4 = 28$ ,  $4 \times 7 = 28$   
 Even if the multiplier and the multiplicand are switched, the answers are still the same.

Mami

The multiplication facts for 7 are the same as adding the multiplication facts for 5 with the multiplication facts for 2.

Naoko

$\text{Multiplication facts for 7} = \text{Multiplication facts for 5} + \text{Multiplication facts for 2}$

The multiplication table of 7 is the same as adding the multiplication tables of 3 and 4.

Yuji

$7 \times 1 = 7$  .....seven, one, 7  
 $7 \times 2 = 14$  .....seven, two, 14  
 $7 \times 3 = 21$  .....seven, three, 21  
 $7 \times 4 = 28$  .....seven, four, 28  
 $7 \times 5 = 35$  .....seven, five, 35  
 $7 \times 6 = 42$  .....seven, six, 42  
 $7 \times 7 = 49$  .....seven, seven, 49  
 $7 \times 8 = 56$  .....seven, eight, 56  
 $7 \times 9 = 63$  .....seven, nine, 63

1 7 pieces of origami paper are to be given to each of 6 children. How many papers do you need altogether?

2 Please make up some word problems that can be solved by using the multiplication facts for 7.

### 2 Multiplication Facts for 8, 9 and 1

#### The multiplication facts for 8

1 Let's make a multiplication table for 8.

$8 \times \square$

1 Please write the answers for the multiplication facts for 8 in the multiplication table on page 31.

2 Let's memorize the multiplication facts for 8!

Let's do the practice on page 29.

1 Let's look at the multiplication table of 8 carefully.

**The Multiplication Table of 8**

$8 \times 1 = 8$  .....eight, one, 8

$8 \times 2 = 16$  .....eight, two, 16

$8 \times 3 = 24$  .....eight, three, 24

$8 \times 4 = 32$  .....eight, four, 32

$8 \times 5 = 40$  .....eight, five, 40

$8 \times 6 = 48$  .....eight, six, 48

$8 \times 7 = 56$  .....eight, seven, 56

$8 \times 8 = 64$  .....eight, eight, 64

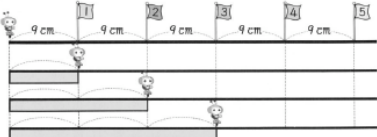

$8 \times 9 = 72$  .....eight, nine, 72

1 There are 6 benches. 8 children can sit on each bench. How many total children can sit on the benches?

#### The multiplication facts for 9

3 Let's make a multiplication table for 9.

$9 \times \square$

1 Please write the answers for the multiplication facts for 9 in the multiplication table on page 31.

4 Let's memorize the multiplication facts for 9!

Let's do the practice on page 29.

1 Let's look at the multiplication table of 9 carefully.

**The Multiplication Table of 9**

$9 \times 1 = 9$  .....nine, one, 9

$9 \times 2 = 18$  .....nine, two, 18

$9 \times 3 = 27$  .....nine, three, 27

$9 \times 4 = 36$  .....nine, four, 36

$9 \times 5 = 45$  .....nine, five, 45

$9 \times 6 = 54$  .....nine, six, 54

$9 \times 7 = 63$  .....nine, seven, 63

$9 \times 8 = 72$  .....nine, eight, 72

$9 \times 9 = 81$  .....nine, nine, 81

### Multiplication Table

		Multipliers								
		1	2	3	4	5	6	7	8	9
Multiplicands	1's									
	2's									
	3's									
	4's									
	5's									
	6's									
	7's									
	8's									
	9's									

Write down the multiplication facts that you learned in the table.

two, six, 12;  
two, seven, 14; ...

31

## Developing Multiplication Facts

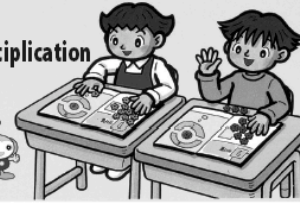

- Organized according to the multiplicand.
- Emphasis on students developing the multiplication table.
- Focusing on one specific property: when the multiplier increases by 1, the product increases by the multiplicand.
- Array diagrams are used to promote the understanding of the basic facts.
- 1 as the multiplicand is treated last. 0 as the multiplicand is discussed in Grade 3.

## 0 as a factor

3A p. 2

1

### Multiplication

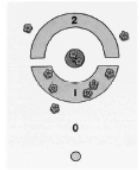

Sayuri and her friends are playing a game with counters.

Multiplication with 0

1 Sayuri played a game with counters and her board ended up as shown in the picture on the right. How many points did she score?

1 Let's write the number of points she got in the table below!

Where the counters landed.	3 points	2 points	1 point	0 points	Total
Number of counters					
Score (points)					

2 Please write math sentences to find how many points Sayuri scored in the 3 and 1 point areas.

Points for the area × Number of counters = Score

3 points...3 ×    =       1 point ...1 ×    =

**2 Properties of Proportional Relationships**

**1** **2** The depth of water is measured in the 2 containers shown above.  
Let's investigate how the depth of water changes as the amount of water increases!

(1)

Amount of Water (dl)	1	2	3	4	5	6
Depth of Water (cm)	4	8	12	16	20	24

(2)

Amount of Water (dl)	1	2	3	4	5	6
Depth of Water (cm)	4	7	10	13	16	19

**1** In Table (1), how does the depth of water change as the amount of water doubles, triples, and so on?

6A, p.8

- 4 What is the length of two  $3\text{cm}$  tapes put together?

Math  
Science

Answer

cm

If a tape is as long as two  $3\text{cm}$  tapes put together, we can say the tape is "**2 times**" **as long as** a  $3\text{cm}$  tape.

You can use the multiplication math sentence  $3 \times 2$  to find the length that is two times as long as  $3\text{cm}$ .

p. 18

## Book 2B, p. 44

- 2 How many chocolates are in the box?  
Think about many different ways to find the answer.

## Book 2B, p. 44

- 1 Please describe how these friends found the answer.

- 2 Let's think about different ideas from them!

What would happen if you turn the chocolate box on its side?

## Properties of Multiplication

Kazuya

I don't remember the answer for  $4 \times 6$ . I forgot.

Let's all think together with Kazuya about how to find the answer to  $4 \times 6$ .

Teacher

## 2 Properties of Multiplication

- 1 **?** Let's think about the way to find the answer to  $4 \times 6$ .

I wonder if we can use the rules for multiplication that we learned in the 2nd grade.

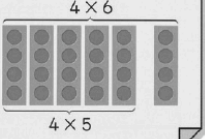

3A, p. 6

The answer to  $4 \times 6$  is  larger than  $4 \times 5$  so ...

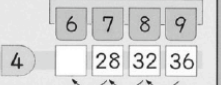

$4 \times 6 = 4 \times 5 + \square$

If the multiplier is one less, then the answer is  less.

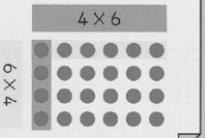

$4 \times 6 = 4 \times 7 - \square$

Even if I switch the multiplicand and the multiplier, the answer is the same, so ...

$4 \times 6 = \square \times \square$

## Multiplication Algorithm (Gr. 3)

# 10

## Multiplication Algorithm (I)

How much is 8 5-yen candies?

$5 \times 8 = 40$   
So it is 40 yen.

How much is 3 pieces of 20-yen paper?

$20 \times 3 = 60$   
So it is 60 yen.

How much is 3 pieces of 32-yen paper?

I wonder if a math sentence could be  $32 \times 3$ ...

How can I use the multiplication tables?

**Let's think about multiplication calculation when the multiplicand gets larger.**

3A, p. 71

**1 Multiplication of 2-digit Number and 1-digit Number**

**1** We bought 3 pieces of 32-yen construction paper.  
How much did they cost altogether?

Math Sentence  $\rightarrow$

Price for 1 piece  $\times$  Numbers you bought = Total Price

I wonder how much it is going to be.

**2** Let's think about a way to calculate!

3A, p. 71

**1** Tell how to calculate  $32 \times 3$  using the picture below.

$32 \times 3 = 96$       Answer: 96 yen

You can do multiplication  $32 \times 3$  using an algorithm shown below.

**How to calculate  $32 \times 3$**

3 2    Line up the numbers vertically in each place value.

$\times 3$

---

3 2    Write 6 from  $3 \times 2 = 6$  in the ones place.

$\times 3$

6

---

3 2    Write 9 from  $3 \times 3 = 9$  in the tens place.

$\times 3$

9 6

We can still use the multiplication table, can't we?

**1**

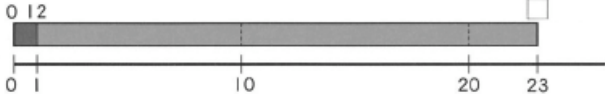

$\times 4$	$\times 1$	$\times 3$	$\times 2$	$\times 2$
2	3	4	0	

3A, p. 72

**2 Multiplication by a Two-digit Number**

**1** You are buying 23 sheets of paper.  
If each sheet costs 12 yen, how much will it cost altogether?

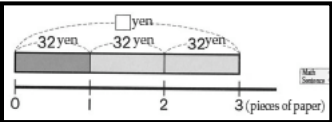

About how much will it be?

3B, p. 49

**2 Multiplication by a Two-digit Number**

**1** You are buying 23 sheets of paper.  
If each sheet costs 12 yen, how much will it cost altogether?

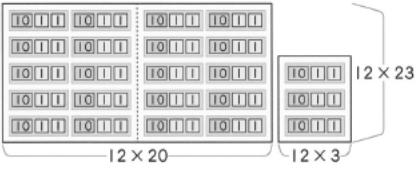

About how much will it be?

**Let's think about how to calculate!**

$12 \times 23$

$12 \times 20 = 240$

$12 \times 3 = 36$

Total **276**

$12 \times 23 = 276$     Answer: 276 yen

It helps if you decompose 23 into 20 and 3.

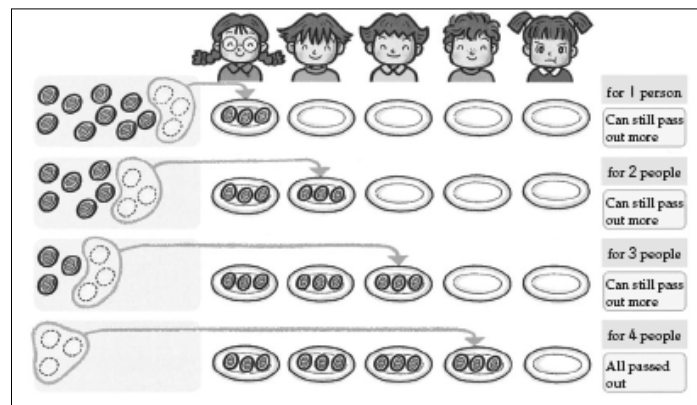

## Division

- Partitive Division
  - Partitioning, fair share
- Quotitive Division
  - Measurement division, repeated subtraction

There are 12 cookies. If 3 people divide them evenly, how many cookies will one person get?

There are 12 cookies. If one child gets 3 cookies, how many children can get cookies?

$$3 \text{ cookies} \times 4 \text{ people} = 12 \text{ cookies}$$

$$12 \text{ cookies} \div 4 \text{ people} = 3 \text{ cookies}$$

$$12 \text{ cookies} \div 3 \text{ cookies} = 4 \text{ people}$$

**13** **Decimal Numbers**

Mine had exactly 2dl.

Mine has 2dl and a little more.

I wonder how we can express the fractional part?

**Let's find out how to express fractional parts!**

3B p. 29

**16** **Fractions**

They are measuring his arm span from the tips of his fingers. I wonder how long it is.

It is 1 m and a little more. We should use a decimal number.

Can you use a decimal number for this?

**Let's think about how to express fractional parts!**

3B p. 57

## Similarities/Differences

- Both problems involve measurements.
  - One involves liquid measures while the other is about linear measurements.
- Both problems involve quantities greater than 1 unit
  - With decimals, the whole quantity is represented using the notation “2.3” but with fractions, mixed numbers are not used to express the whole quantity.

### Decimals

Each of 10 equal partitions of 1 dl is written as 0.1 dl. We say it as “Zero point one deciliters.”

- How many 0.1 dl are in the measuring cup above?  
How much is this?

3B, p. 30

### Fractions

- How long are 2, 3, and 4 pieces of  $\frac{1}{5}$  m? Please express these as fractions on a number line.

3B, p. 60

## Similarities/Differences

- Decimals and fractions as collections of decimal/fraction units, that is, “0.3” is *three* “0.1” units, and  $\frac{3}{4}$  is *three* “ $\frac{1}{4}$ ” units.

## Addition of Decimals

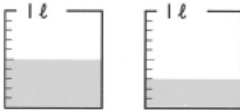

**1** There are two juice bottles. The bigger one contains  $0.5\ell$  and the smaller one contains  $0.3\ell$ . How much juice is there altogether?

**2** Let's think about how to calculate  $0.5 + 0.3$ !

**3** How many 0.1's are in 0.5 and in 0.3?

0.5.....	□ 0.1's
0.3.....	□ 0.1's

$0.5 + 0.3 =$

Answer:   $\ell$

3B, p. 34

## Addition of Fractions

- 3 There is  $\frac{3}{5}$  ℓ of juice in a carton and  $\frac{1}{5}$  ℓ in a bottle. How much juice is there altogether?

- 2 Let's think about how to calculate  $\frac{3}{5} + \frac{1}{5}$ .

- 1 How many  $\frac{1}{5}$  ℓ are in each  $\frac{3}{5}$  ℓ and in  $\frac{1}{5}$  ℓ?

$$\frac{3}{5} \ell \dots \square \frac{1}{5} \ell$$

$$\frac{1}{5} \ell \dots \square \frac{1}{5} \ell$$

$$\frac{3}{5} + \frac{1}{5} = \square$$

Answer:  $\square$  ℓ

3B, p. 62

### ► How many 10's are there?

- 1 How many pieces of origami paper are there altogether?

There are 5 bundles and 2 bundles of 10 pieces of origami paper so...

$$50 + 20 = \square$$

1, p. 93

## Teaching Guide

p. 60 (Grade 3):

Calculations such as  $1/5 + 2/5$  can be thought of as the same as that of whole numbers, taking  $1/5$  as a unit.

p. 69 (Grade 4):

... it is important to help children think of it as counting numbers of a fraction whose numerator is one so that they can see the similarity between addition and subtraction of whole numbers and fractions.

## Decimals/Fractions as Numbers

- Representing decimals/fractions on a number line

## Improper fractions

### ► Improper fractions

3 How many  $m$  are three  $\frac{1}{3}m$ ? Four  $\frac{1}{3}m$ ?

4B, p. 41

## Multiplication of Decimals: Decimal x Whole Number

Let's buy six  $2d\ell$  packs of juice!  
How many  $d\ell$  are there altogether?

$d\ell$

$2d\ell = 0.2\ell$   
Can we calculate with  $0.2$ ?

**1 Multiplication of Decimal Numbers**

1 They bought six  $0.2\ell$  packs of juice.  
How much is the total amount of juice?

( $\ell$ )

4B, p. 60

## Using Number Structure

- 1 How many  $0.1\ell$  do you need to make  $0.2\ell$ ?
- 2 How many  $0.1\ell$  are there in the amount that is 6 times as much as  $0.2\ell$ ?

$$0.2 \times 6 = \boxed{\phantom{00}} \quad \text{Answer: } \boxed{\phantom{00}} \ell$$

4B, p. 62

## Laying Foundation

### ► Times as much

- 11**  There are tapes of different lengths. Please compare the length of each tape to the length of the white tape.

Length of Tapes

	length (cm)
white	8
red	16
blue	20
yellow	12

- 1 How many times as long is the red tape as the white one?

72

4B, p. 72

0 8 cm  
White  
Red 16 cm  
0 □ (times)  $16 \div 8 = \square$  (times)

2 How many times as long is the blue tape compared to the white one?  
It will be a decimal number.

0 8 cm  
White  
Blue 20 cm  
0 2 □ (times)  $20 \div 8 = \square$  (times)

3 How many times as long is the yellow tape compared to the white one?

0 8 cm  
White  
Yellow 12 cm  
0 □ 2 (times)  $12 \div 8 = \square$  (times)

! You can also use decimal numbers to express a "times as much" relationship.

4B, p. 73

### Use of Representations

5 1m of an iron bar weighs 1.36kg.  
How much does 7m of the same iron bar weigh?

0 1.36 □ (kg)  
0 7 (m)

1 Please write a math sentence. Math sentence

2 Let's think about how to calculate!

2 How many 0.01kg are there in 1.36kg?

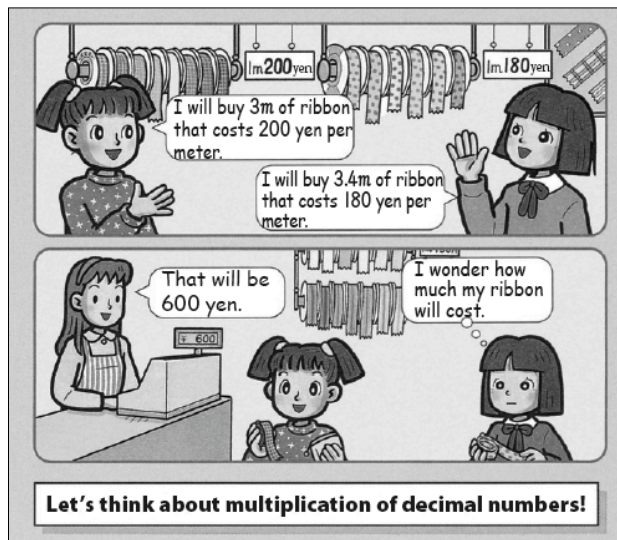

3 How many 0.01kg are there in the amount that is 7 times as much as 1.36?  
 $1.36 \times 7 = \square$  Answer:  kg

4 How do you decide where to place the decimal point of the product?

$$\begin{array}{r} 1.36 \\ \times 7 \\ \hline 9.52 \end{array}$$

4B, p. 64

## Decimal Multipliers

5A, p.27

### 1 Multiplying by a Decimal Number

- 1 We bought 3.4 meters of ribbon that cost 180 yen per meter. What was the price of the ribbon?

What is the math sentence for the price of 3m of the ribbon?

- 2 How should we write the math sentence?

$$\text{Price for } 1\text{m} \times \text{Length we bought (Unit: m)} = \text{Price we have to pay}$$

5A, p.26

Even if the length of the ribbon is shown as a decimal number, we can construct a multiplication sentence just like we do with whole numbers to find the price of the ribbon.

$$180 \times 3.4$$

Let's think about how to calculate  $180 \times 3.4$ !

I can do it if the multiplier is a whole number...

5A, p.27

Let's explain these two friends' methods!

Because 3.4m is made out of 34 pieces of 0.1m...

Sayuri

Price for 0.1m .....  $180 \div 10$

Total for 34 pieces .....  $(180 \div 10) \times 34$

$180 \times 3.4 = 180 \div 10 \times 34 =$   Answer:  yen

5A, p.28

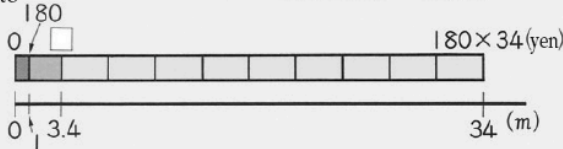

Makoto

If the length of the ribbon is 10 times longer, the price becomes 10 times as much.

$$180 \times 3.4 = \square$$

10 times ↓ 10 times ↓  $\frac{1}{10}$

$$180 \times 34 = 6120$$

Price for 34m .....  $180 \times 34$

Because 3.4m is  $\frac{1}{10}$  of 34m ....  $(180 \times 34) \div 10$

$180 \times 3.4 = 180 \times 34 \div 10 = \square$  Answer:  $\square$  yen

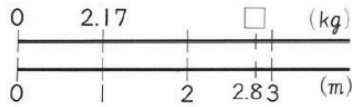

Both of them came up with the idea of using whole numbers to do the calculation.

5A, p.27

## Developing Algorithm

**2** There is a 1m pipe that weighs 2.17kg. How much would 2.8m of the pipe weigh?

Math Sentence:

**1** Let's think about how to do the calculation!

Mami

If we use Makoto's idea and change the decimal numbers to whole numbers...

$$2.17 \times 2.8 = \square$$

100 times ↓ 10 times ↓ 1000 times ↓  $\frac{1}{1000}$

$$217 \times 28 = 6076$$

5A, p.29

**2** Let's think about how to calculate  $2.17 \times 2.8$  with the multiplication algorithm!

5A, p.29

## More than a procedure

### ► Multiplier and the size of the product

**4** There is a ribbon that costs 180 yen for  $1m$ . We want to buy two strips of that ribbon. One strip is  $1.8m$  and the other one is  $0.8m$ . Which strip of ribbon costs less than 180 yen?

5A, p.31

**2** Let's think about the relationship between the multiplier and the size of the product!

(1)  $180 \times 1.8 =$

(2)  $180 \times 0.8 =$

**1** Which one of the products becomes smaller than 180?

**!** In multiplication of decimal numbers, if the multiplier is less than 1, the product will be less than the multiplicand.

If multiplier  $> 1$ , then the product  $>$  multiplicand  
If multiplier  $< 1$ , then the product  $<$  multiplicand
